

PRINCETON
PREMIUM FUND

STRIVING TO PROFIT FROM THE SCIENCE AND ART OF TAKING RISK

PRINCETON FUND
ADVISORS, LLC

DISCLOSURES

Investors should carefully consider the investment objective, risks, charges and expenses of the Princeton Premium Fund. This and other information is contained in the prospectus and should be read carefully before investing. For a prospectus please call the Princeton Premium Fund at 1-888-868-9501. The Fund is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Northern Lights Distributors, LLC and Princeton Fund Advisors, LLC are not affiliated.

Mutual funds involve risk, including possible loss of principal.

There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. The value of the Fund's investments in fixed income securities will fluctuate with changes in interest rates. Options involve risks possibly greater than the risks associated with investing directly in securities. There is no guarantee that the sub-adviser's options strategy will be effective or that suitable transactions will be available.

The Fund uses options to increase the Fund's combined long and short exposure which creates leverage, which can magnify the Fund's potential for gain or loss. The Fund expects its premium collection options strategy to be market neutral and therefore the Fund does not expect to participate fully in positive markets which may not generate positive returns as intended. Liquidity risk may prevent the Fund from selling illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations.

As a non-diversified fund, the Fund may invest more than 5% of its total assets in the securities of one or more issuers. Dramatic or abrupt volatility within the market would negatively impact the Fund's premium collection options strategy. The Fund's return may not match the return of the S&P 500 Index because it is not investing the equity securities that comprise such index. The Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities.

The Fund is a new mutual fund and prior to its recent commencement of operations had no history of operations for investors to evaluate. The adviser's and any sub-adviser's judgments about the long-term returns the Fund may generate through its principal investment strategies may prove to be incorrect and may not produce the desired results. The Fund's principal investment strategies may not achieve their intended results and each strategy could negatively impact the Fund.

There is no guarantee the fund will meet its objective.

PRINCETON PREMIUM FUND – EXECUTIVE SUMMARY

The Fund's goal is to profit from the science and art of taking risk:

- We take an approach similar to an insurance company in our investment strategy: To focus on the probability of success and the management of risk.
- The Fund's goal is to collect small amounts of premium each week by selling put options on the S&P 500 (SPX) that have a one week time frame to expiration.
- Seeking to limit risk, the Fund will purchase a put option on the same S&P 500 (SPX) contract with the same terms other than the strike price.
- The Fund may hold significant assets in cash, treasuries, or short-term fixed instruments.
- The Fund's goal is to deliver compelling, non-correlated absolute returns.
- Because the options are treated as Section 1256 contracts under the Internal Revenue Code 60% of gains or losses from the options will be treated as long-term and 40% as short-term capital gains.

Options are subject to changes in the underlying securities or index of securities on which such instruments are based which create leverage and can magnify the Fund's potential for gain or loss. The value of the Fund's investment in fixed income securities will fluctuate with changes in interest rates. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

We believe our success comes from focusing on the risk of each trade:

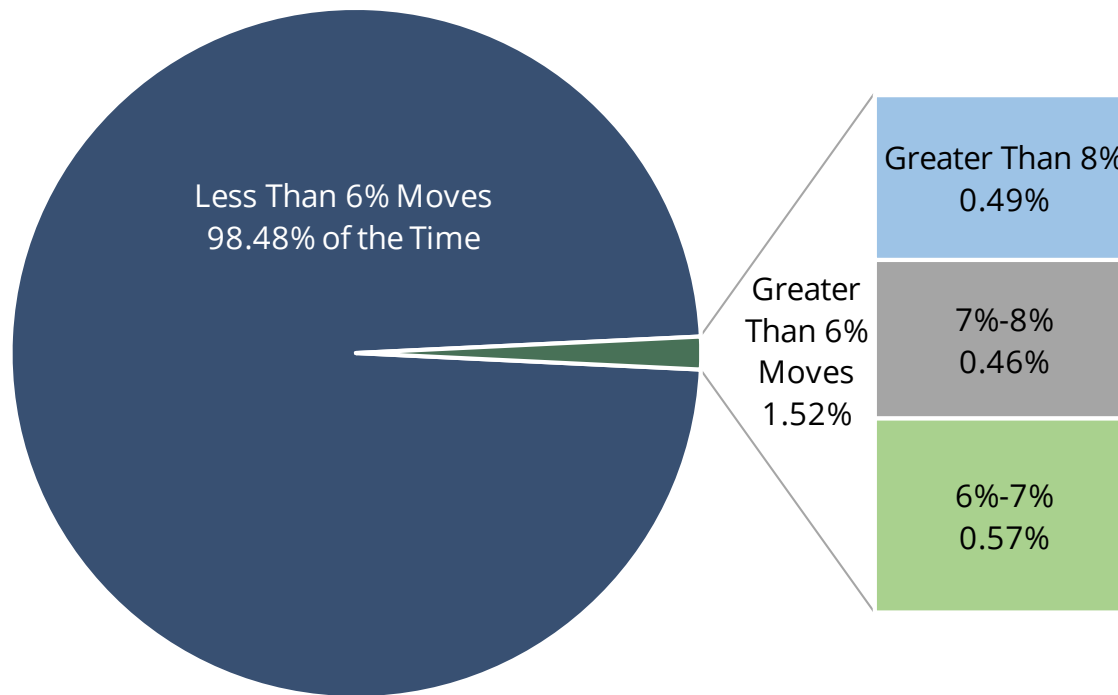

- By maintaining a weekly investment horizon and relying on over 65 years of history on market movement, we believe it is possible to realize positive returns through options transactions while maintaining acceptable risk limits.
- The Fund employs a rules-based system that is replicated weekly
 - Options-based strategy that seeks to generate a small weekly profit
 - Tactical portfolio management overlays to potentially mitigate weekly volatility
- As shown on page 5, we believe the probability of success is significantly skewed in our favor.

S&P 500 IN PERSPECTIVE – “ODDS IN OUR FAVOR”

Historically, The S&P 500 index is relatively stable week to week. The strategy is designed to take advantage of these facts:

- Since January 1950 through June 2020, in 3,678 weeks, the market has moved up or down less than 6% 98.48% of the time.

S&P 500 Weekly Moves

Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

“SCIENCE” AND “ART”

A combination of “Science” and “Art” are utilized to manage the investment portfolio

Science: The calculation of the probability that a put option will expire worthless

The sale of the options is based on the determination of a proprietary, systematic model as to where the strike price will have a high percentage chance of expiring worthless

Sale of Put: Based on our model, a 99.50% or greater probability of expiring worthless

Art: Refining touches to the strategy to attempt to minimize loss and maximize potential profits

The timeframe for each trade is limited to one week or less

Amount of capital allocated to the strategy is adjusted based on market conditions

Trading positions are closed early to:

Lock in profits

Reduce Risk

Mitigate loss scenarios

Investment process focused on risk where return is the goal, replicated weekly.

Model Inputs	Model Outputs
Volatility as measured by VIX	Strike prices that meet our probability standards
Time to expiration	
Mean	
Standard Deviation	Put spreads:
Current S&P 500 Index level	Generally written at what we believe to be a 99.5% or greater probability of success
The 1 year Treasury Interest Rate	

Managing the Risk Return Profile of the Investment Strategy:

- Time period for each trade – A weekly investment cycle has fewer unknowns than a monthly, quarterly, or annual cycle
- Capital allocated to the trading strategy is based on a target return/risk profile established for the Fund
- Allocated capital may be adjusted by the adviser in an attempt to take advantage of increasing market opportunities or to minimize risk
- The strike price of the options is determined by the strategy's risk controls – a decision to place a trade is then determined based upon the premium available at that strike price
- Trading positions will be closed or reduced:
 - In an attempt to lock in profits if they are in a target range
 - If the cost to close the trades reaches a predetermined level
 - In an attempt to mitigate loss scenarios

Risk Management Techniques utilized:

- One for one protective puts are purchased in an effort to define risk and maximize portfolio margining.
- Long VIX options may be utilized in an attempt to hedge catastrophic market declines.
- Collateral usage per contract is adjusted to permit trading flexibility and in an attempt to control volatility.
- The strike price where options are sold is adjusted for each trade based upon market volatility at the time each trade is placed.
- Close and repurchase or roll down puts if the probability of success declines below a defined probability level – Typically 66.67%.
- Position size is managed in an effort to control volatility.

Options are subject to changes in the underlying securities or index of securities on which such instruments are based which create leverage and can magnify the Fund's potential for gain or loss.

The adviser will tactically allocate a specific amount of Fund capital to the strategy each week.

- 50% in normal market conditions
- 50-85% when market conditions may allow for a short-term tactical increase
 - For example, after a spike in volatility
- The portfolio team may decide not to implement all or part of the trade in a given week if the opportunity of the trade is minimal.
- The portion of the Fund not allocated to the options strategy will be allocated primarily to cash, Treasuries, or short-term fixed income.

FUND PERFORMANCE

Historical Performance

As of June 30, 2020	Q2 2020	Year To Date	One Year	Three Year	Since Inception
PPFIX Class I (NAV)*	3.44%	-5.99%	-3.91%	0.09%	1.65%

*Inception date for the I and A share classes is 11/16/2016. Performance shown for November and 2016 is for a partial month and year.

Performance shown for periods longer than one year is annualized.

The performance data quoted here represents past performance. Current performance may be lower or higher than the performance data quoted above. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Past performance is no guarantee of future results. The Fund's total annual operating expenses are 3.47% and 3.22% for the Class A and I shares, respectively. The Fund's investment advisor has contractually agreed to waive management fees and to make payments to limit Fund expenses until at least January 31, 2021. After this fee waiver, the expense ratios are 3.01% and 2.76% for the Class A and I shares, respectively. These fee waivers and expense reimbursements are subject to possible recoupment from the Fund in future years. The maximum sales load for the Class A shares is 5.75%. A fund's performance, especially for very short periods of time, should not be the sole factor in making your investment decisions. For performance information current to the most recent month-end, please call toll-free (888) 868-9501. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

MANAGEMENT TEAM

Princeton Fund Advisors, LLC, together with its affiliates, manages approximately \$2.3 billion of assets (as of 06/30/2020) for institutional and private clients worldwide. Princeton Fund Advisors, LLC is a Registered Investment Advisor (“RIA”) with the SEC. The firm’s two Investment Committee Members contribute more than 60 years of alternative asset management experience to the portfolio construction and management process. The company has offices in Denver, Colorado and Minneapolis, Minnesota.

PRINCETON FUND ADVISORS TEAM

Portfolio Managers:

Greg D. Anderson, *Manager and President*

Prior to founding Princeton Fund Advisors, LLC and its affiliated entities, Mr. Anderson was a Senior Vice President and Managing Director of Investment Manager Search, Evaluation, and Due Diligence at Portfolio Management Consultants, Inc. Mr. Anderson was previously employed with Deloitte & Touche where he specialized in the areas of estate planning, health care and non-profit organizations, and tax and personal finance planning for high net worth individuals. Mr. Anderson holds a B.A. degree from Hamline University in Minnesota and a J.D. from the University of Minnesota School of Law. Mr. Anderson is a Certified Public Accountant (inactive).

John L. Sabre, *Manager and Chief Executive Officer*

Prior to founding Princeton Fund Advisors, LLC and its affiliated entities, Mr. Sabre was a Senior Managing Director at Bear Stearns & Co. and Head of the Mezzanine Capital Group. Mr. Sabre previously served as President of First Dominion Capital, which managed \$3.0 billion of assets and is now owned by Credit Suisse First Boston. Prior to his position at First Dominion Capital, Mr. Sabre was a Managing Director and founding partner of Indosuez Capital, the merchant banking division of Credit Agricole Indosuez. Mr. Sabre holds a B.S. degree from the Carlson School at the University of Minnesota and an M.B.A. degree from the Wharton School at the University of Pennsylvania.

Zachary R. Slater, *Vice President, Portfolio Strategy*

Mr. Slater joined Mount Yale and its affiliated entities in 2011 to conduct and oversee research on new investment opportunities. His experience includes evaluating and monitoring traditional, alternative and private investment strategies. Additionally, he has experience transitioning strategies into different investment vehicles. Mr. Slater is responsible for sourcing new managers, conducting due diligence on potential managers and ongoing monitoring of current managers and investments. He holds a B.S. from the Daniels College of Business at the University of Denver.

GLOSSARY

- *The **S&P 500 Index** is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.*
- ***VIX** is the ticker symbol for the Chicago Board Options Exchange (CBOE) Volatility Index, which shows the market's expectation of 30-day volatility.*
- ***A Put Option** is an agreement that gives an investor the right, but not the obligation, to sell a stock, bond, commodity or other instrument at a specified price within a specific time period.*
- ***Correlation** is a statistic that measures the degree to which two things move in relation to each other.*
- ***Volatility** is a statistical measure of the dispersion of returns for a given security or market index.*
- ***Mean, or Average** is a number expressing the central or typical value in a set of data, in particular the mode, median, or (most commonly) the mean, which is calculated by dividing the sum of the values in the set by their number.*
- ***Standard Deviation** is a measure of the dispersion of a set of data from its mean. If the data points are further from the mean, there is higher deviation within the data set.*
- ***Long** refers to buying an asset such as a stock, commodity or currency, with the expectation that the asset will rise in value. The inherent risk is a decrease in the price of the security that may result in a loss.*
